MOOV PRO FEED PUSHER

Less labor, greater efficiency
and healthier animals

Home of the clean stable

www.joz.nl/en

Automatic feed pushing means: 24-hour-a-day access to fresh forage! Increase in feed intake helping to boost milk production. Feed is available day and night, allowing lower-ranking cows to perform better. A reduction in labor costs!

The Moov Pro feed pusher is a fully automatic robot designed for livestock farms. With the Moov Pro, your herd has access to fresh feed at all times.

This enhances the cow's health and prevents ailments like rumen acidosis and laminitis. The Moov Pro uses transponder technology, which means there are no obstacles in the barn. This technology allows the programming of an unlimited number of routes for multiple feed groups. Fully automatic charging is possible with the J-Load.

J0Z Dealer:

The JOZ Management System (JMS)

The JMS enables the farmer or dealer to remotely monitor the Moov Pro 24/7. This facilitates the operation of the robot and increases the quality of service.

Features of the JOZ robotic feed pusher

- Maintains good feed blend
- Robustness and weight of the machine
- Drum almost reaches the floor; clean floor
- Jumpstart; route is resumed without the robot having to return to the charging station

Features of the Moov Pro

- Two-day scheduling for farmers who feed every other day
- One shot, for farmers who feed at irregular intervals
- Postponed starting time for occasions feed is given earlier or later
- Parking function, so the robot can park outside during feeding
- Pause/Play function allowing the Moov Pro to be halted temporarily
